Patent No. 6245503

GENERAL INFORMATION:
APPLICANT: MAERTERS, GERT
APPLICANT: BUYSE, MARIE-ANGE
APPLICANT: BUYSE, MARIE-ANGE
TITLE OF INVENTION: PROTEINS FOR DIAGNOSTIC AND THERAPEUTIC USE
NUMBER OF SEQUENCES: 111
CORRESPONDENCE ADDRESS:
ADDRESSEE: NIXON & VANDERHYE P.C.
STREET: 11100 NORTH GLEBE ROAD

FIRET: 11100 NORTH GLEBE ROAD

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AAT12704-T12709 and AAT12961-T12974 represent hepatitis C virus (HCV) E1

CC and B2 protein coding sequence constructs. These sequences are included
in vectors for the production of recombinant B1, B2, and B1/E2 proteins.

CC The recombinant proteins can then be isolated using a method of the
invention. In the method, the envelope proteins are purified by
carrying out a disulphide bond cleavage, or a reduction step with a

CC disulphide bond cleavage agent, after 19sis of recombinant host cells.

CC disulphide bond cleavage agent, after 19sis of recombinant host cells.

The constructs containing the purified HCV envelope proteins can be used

CC for vaccinating humans against HCV, for in vitro detecting one or
antibodies in a sample, and in a serotyping assay for detecting one or
cc more serological types of HCV present in a biological sample.

CC constructs can also be immobilised on a solid substrate and incorporated

CC constructs can also be immobilised on a solid substrate and incorporated

CC the genotype of HCV. The new purification method preserves the

CC conformation of the recombinantly expressed B1, B2 and B1/E2, and

CC and minates contaminating proteins. Antigens isolated using this method

CC are more reactive with human sera than those isolated by known
proteins - in presence of disulphide bond cleavage agent, to produce proteins suitable for direct use in vaccines or diagnostic assays of HCV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 630 BP; 127 A; 175 C; 168 G; 160 T; 0 other;

The present invention relates to new therapeutic vaccine compositions for inducing hepatitis C virus (HCV)-specific antibodies, comprising a composition containing at least one purified recombinant HCV single or specific oligomeric recombinant envelope proteins selected from an El and an El protein, and optionally a pharmaceutical adjuvant. The vaccines are useful for inducing HCV-specific antibodies or for immunishing humans againt HCV. The recombinant HCV B1 and/or E2 proteins are useful as vaccines or therapeutics, in HCV E1 and/or E2 proteins are useful as vaccines or therapeutics, in HCV screening and confirmatory antibody tests, for raising antibodies, in the preparation of medicament, and for in viro monitoring of HCV disease or prognosing the response to invitro monitoring of HCV disease or prognosing the response to treatment of patients suffering from HCV infection. The present sequence is a coding sequence described in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CTCGTCGGCGCTCCCGTAGGAGGCGTCGCAAGAGCCCTTGCGCATGGCGTGAGGGCCCTT 120

                             Compositions comprising at least 5, and pref. 8 or more contiguous nuclectides selected from an HCV type 3 genomic sequence, more particularly (1) the region spanning positions 417-957 of the Core/E1 region of HCV subtype 3s, (1i) the region spanning positions 6464-4730 of the NS3 region of HCV type 3; (iii) the region spanning positions 892-529 of the NS3 region of HCV type 3; (iii) the region spanning positions 8021-8215 of the NS5 region of HCV BR36 subgroup of HCV subtype 3s; or (v) an HCV subtype 3c genomic subgroup of HCV subtype 3s or (v) an HCV subtype 3c genomic subgroup of HCV subtype 3s or (v) an HCV subtype 3c genomic isolate belonging to a specific genotype, or as a probe for specific detection/classification of nucleic acid. Polypeptides encoded by Ct he nucleotides in such compositions may be used for immunisation against HCV, for the detection of antibodies directed against HCV and for serotyping. This sequence corresponds to the Core/E1 region of HCV subtype 3a and is taken from a clone designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AACGGTCCAGACCTGTAACTGCTCGCTGTACCCAGGCCATCTTTCAGGACATCGAATGGC

(ii) the region spanning positions 4892-5292 of the NS3 region of HCV type 3; (iii) the region spanning positions 8023-8235 of the NS5 region of the BR36 subgroup of HCV subtype 3; (iv) the cegion spanning positions 8023-8235 of the NS5 region of the BR36 subgroup of HCV subtype 3a or (v) an HCV subtype 3c genomic sequence, may be used as primers to amplify nucleic acid from an isolate belonging to a specific genotype, or as a probe for specific detection/classification of nucleic acid. Polypeptides encoded by the nucleotides in such compositions may be used for immunisation against HCV, for the detection of antibodies directed against HCV region of HCV subtype 3a and is taken from a clone designated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     243
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  303
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Compositions comprising at least 5, and pref. 8 or more contiguous nucleotides selected from an HCV type 3 genomic sequence, more particularly (1) the region spanning positions cequence, more particularly (1) the region spanning positions of HCV subtype 3; (1i) the region spanning positions 4644-4730 of the NS3 region of HCV type 3; (1ii) the region spanning positions 8022-8225 of the NS3 region of HCV type 3; (1ii) the region spanning positions 8022-8235 of the NS5 region of the BR36 subgroup of HCV subtype 3a; or (v) an HCV subtype 3c genomic region spanning positions 8022-8235 of the NS5 region of the BR36 subgroup of HCV subtype 3a; or (v) an HCV subtype 3c genomic captered; may be used as primers to amplify nucleic acid from an isolate belonging to a specific genotype, or as a probe for specific detection/classification of nucleic acid. Polypeptides encoded by the nucleotides in such compositions may be used for immunisation against HCV, for the detection of antibodies directed against HCV and for serotyping. This sequence corresponds to the Core/E1 region of HCV subtype 3a and is taken from a clone designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GTCGGCGCTCCCGTAGGAGGCGTCGCAAGAGCCCTTGCGCATGGCGTGAGGGCCCTTGAA

```
sequence, may be used as primers to amplify nucleic acid from an isolate belonging to a specific genotype, or as a probe for specific detection/classification of nucleic acid. Polypeptides encoded by the nucleotides in such compositions may be used for immunisation against HCV, for the detection of antibodies directed against HCV and for serotyping. This sequence corresponds to the Core/E1 region of HCV subtype 3a and is taken from a clone designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (updated)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  541

Polymeptides encoded by C the nucleotides in such compositions may be used for immunisation against HCV, for the detection of antibodies directed against HCV and for serotyping. This sequence corresponds to the Core/E1 region of HCV subtype 3a and is taken from a clone designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

Polypeptides encoded by the nucleotides in such compositions may be used for immunisation the nucleotides in such compositions may be used do immunisation to against HCV, for the detection of antibodies directed against HCV and for serotyping. This sequence corresponds to the Core/E1 region of HCV subtype 3a and is taken from a clone designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CCTCTATGTCCTTACCAACGACTGTTCCAATAGCAGTATTGTGTACGAGGCCGATGACGT

The isolated sequences are useful for the prodn. of primers useful for detecting the presence of HCV in a sample, the primers are also useful for HCV genotyping. Proteins encoded by the cDNAs can be used in vaccines for immunising against HCV infection. The

AAQ81882 encodes AAR69671 hepatitis C virus (HCV) envelope 1 (E1) protein isolate S52, both can be used for the diagnosis of HCV infection, and in the prodn. of anti-HCV vaccines, antibodies and antisera. The cDNA may also be used to inhibit the expression of the HCV E1 gene.
   Envelope 1 cDNAs of 51 hepatitis C virus isolates - and derived
oligo-nucleotide(s), peptide(s) and proteins, used in diagnosis
and in vaccines
                                                                                                                                   Sequence 576 BP; 108 A; 153 C; 166 G; 149 T; 0 other;

                                                                                                                                                                                                                                                            AAT16559-T16609 are cDNAs encoding the El (envelope-1) protein of 51 H isolates. The isolated sequences are useful for the prodn. of primers useful for detecting the presence of HCV in a sample, the primers are also useful for HCV genotyping. Proteins encoded by the cDNAs can be used in vaccines for immunising against HCV infection. The proteins may also be used to detect antibodies against HCV in serum, saliva, lymphocytes or other mononuclear cells. The antibodies may be used in the prevention of HCV infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ATTGTGTACGAGGCCGATGACGTTATTCTGCACACCCCGGCTGCATACCTTGTGTCTCCAG
